## / ABOUT ME

I specialize in developing responsive, accessible & visually cohesive web applications using advanced front-end skills & techniques geared towards optimum user experience. With my background in Advertising & Digital Marketing, I have developed a keen eye for innovative design, and working in a collaborative environment focused on customer & team success has allowed me to be an effective front-end developer.

## / PROJECTS

### >> Jobs Developer

[Live](#) | [GitHub](#)

Job Search App build with React & Firebase which allows users to search for a job based on title or location. Data retrieved from Adzuna RESTful API.

### >> The Film Factory

[Live](#) | [GitHub](#)

Enter an English movie title to get foreign language movie recommendations with data from TMDB API. Users can save their choice and also look up other users suggestions. Built using React with custom hooks & Firebase.

### >> Weather App

[Live](#) | [GitHub](#)

User interactive app which retrieves current weather forecast from Open Weather API based on user input location.
